Alan Fernandes
Frontend developer

About me

Hello! I'm Alan, frontend dev based in Curitiba, Brazil. I started my career as a UX Designer, but I was always interested and got involved with web development. My background as a designer provides me knowledge about project documentation, information architecture, critical thinking, and communication with the design team. I'm also pretty hyperactive and a fast learner who's motivated by problem-solving.

Education

UTFPR - Bachelor's degree in design
2015 - 2019

Experience

Freelancer - Web developer
January 2020 - Present

I started by developing websites in Wordpress, but nowadays I use Astro (or Nuxt) as a framework, Storyblok as a CMS, and Netlify for hosting. These jobs provide me with ample knowledge about semantic HTML, accessibility, CSS, and micro-interactions with Javascript.

WeON - UX Designer
November 2021 - January 2023

In my first few months, I worked as a much more generalist designer, interviewing users and creating prototypes, and developing a design system, but eventually moved to a more technical niche inside my team. I was part of more technical projects with a focus on information architecture, such as laying the foundations for an API and the mapping of a database. I was also in charge of the documentation of other projects, product ownership, and communication between the design and development teams. My collegues called me "Fullstack Designer".
